Abstract of CN 1407823 (A)

A interacting short message system consists of a central process module, a visiting module, an output module, and an input module. It is used for the present digital mobile telephones with no needs to reform by extra hardwares or softwares. The contents are provided in a simple format and the interacting short message system can transmit the contents in a form of interactive menu, so that a user can operate according to the prompting.
